

Purpose: Lead mapping synopsis

From: City of Washington Court House

To: OEPA and other interested parties

The following map of our distribution system is based off of age of neighborhood and homes in our system.

Our system contains around 7,000 taps with a wide range of building type and age, consisting of industrial, duplex's, apartment complexes, single family owned homes as well as single family rented homes and several business establishments from fast food to larger retailers.

We currently have no records of lead service lines in our system and those that we find are removed immediately. The only thing that we are able to go on is the age of a home and that is indicated in the tier system put forth by the OEPA for us to follow. Age wise in our system we range from before the turn of the century to newer builds that were completed this year.

Thank you

David Gardner
