To: OEPA

Contained in this packet is a map that includes the identification of distribution areas of the Village of Paulding that may possibly contain lead service lines or lead fixtures. The Village of Paulding has been following the practice of replacement of lead service lines as they have been found through maintenance or replacement of infrastructure throughout the Village.

While we are unable to guarantee at this time, we believe that all construction post 1986 was completed following the amended rules in the SDWA regarding lead content in plumbing.

The Village of Paulding is more than happy and willing to attempt to comply with all rules, regulations, and requests set forth by the EPA and the OEPA. If there are any additional questions or comments, please feel free to contact our Village Utility office or our Water/Waste Water superintendent.

Sincerely,

Greg Reinhart - Mayor
Village of Paulding

Identification of distribution areas with lead service lines or lead fixtures:

Even though there is not completed documentation, The Village of Paulding believes that all lead service lines on the public side have been replaced. This is due to years of following a replacement policy if lead lines were encountered. The Village also can not verify with documentation that any private side connection does not have lead fixtures. We assume that construction post 1986, 1996, 2011 and 2014 was completed following the amended rules in the SDWA regarding lead content in plumbing. We are not able to provide documentation that shows this for the recent building construction. This is why the Village is placing all service connections in the group of "possible lead service fixtures". See attached map of the distribution system.

The Village has already submitted the Spreadsheet for Lead and Copper sample sites (copy attached).
