Re: Lead Service Line & Fixture Mapping Narrative

To whom it may concern:

The City of Marysville Division of Water along with the City of Marysville IT Department has completed the mapping of our distribution system that best depicts our understanding of Lead service lines, Lead-based Solder and Fixtures assembled with Lead-based solder. The map has been symbolized to indicate the following:

Red Stars: 30 sites included on the City's sampling plan

Yellow Stars: locations of known Lead Service lines.

Tan shaded area: locations of possible Lead Fixtures.

Green shaded area: locations where there are no known Lead Service lines, lead solder, or fixtures

Gray shaded area: locations where the presence of Lead service lines, lead solder or fixtures is currently unknown.

The City of Marysville's map is web based and can be reached at the following link. Hover your cursor over the link for instructions to open the link. <http://map.marysvilleohio.org/lead/>

We based our map symbology on records that are kept in the Water Division office and in the City's Engineering department. We also utilized the Union County Auditors website to determine the age of the structures in town and then used the guidance provided by the OEPA which generalized building construction dates with associated plumbing characteristics.

Should you have any questions on the mapping or this narrative, please call the Marysville Division of Water at (937) 645-7330 Monday- Friday between the hours of 7:00 a.m. and 3:30 p.m. or send an email to ssheppeard@marysvilleohio.org

Sincerely,

Scott Sheppard
Water Superintendent
City of Marysville
Division of Water
