

**VERIFICATION FORM FOR COMMUNITY PUBLIC WATER SYSTEMS
CLAIMING NO LEAD SERVICE LINES**

The owner or operator of all community public water systems must identify and map areas of their distribution system that are known or are likely to contain lead service lines. Systems must submit a copy of the applicable map to the Ohio Department of Health and the Ohio Department of Job and Family Services. Systems must also submit a report to the director containing at least both of the following: (1) The applicable map with narrative, and (2) A list of sampling locations used to collect samples as required by Ohio Revised Code (ORC) Section 6109.121 and any rules adopted thereunder, including contact information for the owner and occupant of each sampling site.

Should a water system determine no lead service lines exist in their distribution system, they must provide information stating they reviewed, at the minimum, historical permit records and local ordinances, distribution maintenance records and information pertaining to installation dates or materials for all services lines. This information must be verified below.

I HEREBY CERTIFY THAT THE FOLLOWING METHOD(S) WERE USED TO DETERMINE NO LEAD SERVICE LINES EXIST IN THIS WATER SYSTEM'S DISTRIBUTION SYSTEM, AS REQUIRED BY ORC 6109.121(F):

LEAD SERVICE LINE VERIFICATION
<p>This PWS states they have no lead service lines and has reviewed the following information (select one or more of the following):</p> <ul style="list-style-type: none"><input type="checkbox"/> Historical permit records and/or local ordinances<input type="checkbox"/> Distribution maintenance records (i.e. meter replacement, waterline break repairs)<input checked="" type="checkbox"/> Information pertaining to installation dates for all service lines (i.e. after 1986 when lead services lines were banned)<input checked="" type="checkbox"/> Service line material of all service lines is known (i.e. all service lines are known to be PVC)

March 01, 2017

To comply with HB 512 and section 6109.121 of the Ohio Revised Code (ORC), Queen City MHP has compiled this report and the attached map to identify known components of the distribution as well as components that possibly could contain lead.

Queen City is a Class A Mobile Home Park that provides water to 51 mobile home sites. The water systems distribution main lines are galvanized and the service lines are black polyethylene. These were installed during original construction in 1970. The transmission line from Well #3 to Well #2 is PVC as well as the piping in the well incorporating pressure tanks and a chlorine day tank. The mobile home plumbing is the responsibility of the home owner.

The following information and map does not verify the presence of lead in any of the plumbing or components of the individual mobile homes, but since there is no definitively practical way to determine lead content of installed fixtures and solder in the mobile homes themselves, this report will show the possible locations.
