

RE: Sherwood Village  
Report  
Drinking Water Program  
Defiance County  
PWS ID: OH2000712

Ohio built prior to 1998 or that use plumbing material or solder  
ed before 1998 may have materials with greater than 8% lead and are at  
ik of contributing lead to the drinking water than materials  
ed after 1998.

. buildings built and plumbing materials manufactured after 2014 were  
have less than 0.25% lead by weight and have the lowest risk for  
; lead to the drinking water. It should be noted however that,  
ohibited, some use of leaded solder or leaded components may have  
:er the prohibitions became effective.

ie areas outlined in gray are parcels that are connected to the Village of  
water distribution system. At this point in time, the village is unable to  
what these service lines are made from. We have the highest level of  
that none of the lines are lead, but are certain that the majority are still  
er and/or have leaded solder.
