Narratives on Water Lines within the Cloverleaf MHP, LLC

Cloverleaf Mobile Home Park Community, PWS ID: OH5200012

The area map is attached

- The looped cyan line in the map indicates the underground water line which is 2" PVC replacing a previous 2" galvanized iron line. The 2" PVC was installed in the late 70's by Mr. James Ward of Strongsville, Ohio, the previous owner of the park.
- The pump house is located on the upper right corner of the map. There are 3 wells located in the property that feed into the storage tanks in the pump house through 1 1/2" Golden Jet™ line (made of polyethylene plastic). The connection in between the water pumps and Golden Jet™ line is 1 1/2" brass adapter.
- The service lines from the 2" PVC line to individual lots, up to the shutdown valves, are 1/2" copper lines. From the shut down valves to the individual trailers are mostly 1/2" CPVC or copper lines and we are not aware of any lead lines or galvanized iron lines that are in use anywhere in the park today.
- Inside individual trailers, the water lines are all private; belong to individuals who own the trailers. To our knowledge, they are mostly 1/2" CPVC lines and some 1/2" or 3/8" copper lines. No galvanized iron line or lead line are inside any of the trailers in the park.
- The shutdown valves underground are all 2" brass. There were a few water leaks in the past 10 years which required digging, the park has only encountered 2" PVC line and 2" brass shutdown valves. That confirmed on what we learned from James Ward (440-238-6830), the previous owner.

**VERIFICATION FORM FOR COMMUNITY PUBLIC WATER SYSTEMS
CLAIMING NO LEAD SERVICE LINES**

The owner or operator of all community public water systems must identify and map areas of their distribution system that are known or are likely to contain lead service lines. Systems must submit a copy of the applicable map to the Ohio Department of Health and the Ohio Department of Job and Family Services. Systems must also submit a report to the director containing at least both of the following: (1) The applicable map with narrative, and (2) A list of sampling locations used to collect samples as required by Ohio Revised Code (ORC) Section 6109.121 and any rules adopted thereunder, including contact information for the owner and occupant of each sampling site.

Should a water system determine no lead service lines exist in their distribution system, they must provide information stating they reviewed, at the minimum, historical permit records and local ordinances, distribution maintenance records and information pertaining to installation dates or materials for all services lines. This information must be verified below.

I HEREBY CERTIFY THAT THE FOLLOWING METHOD(S) WERE USED TO DETERMINE NO LEAD SERVICE LINES EXIST IN THIS WATER SYSTEM'S DISTRIBUTION SYSTEM, AS REQUIRED BY ORC 6109.121(F):

LEAD SERVICE LINE VERIFICATION
<p>This PWS states they have no lead service lines and has reviewed the following information (select one or more of the following):</p> <ul style="list-style-type: none"><input type="checkbox"/> Historical permit records and/or local ordinances<input type="checkbox"/> Distribution maintenance records (i.e. meter replacement, waterline break repairs)<input type="checkbox"/> Information pertaining to installation dates for all service lines (i.e. after 1986 when lead services lines were banned)<input checked="" type="checkbox"/> Service line material of all service lines is known (i.e. all service lines are known to be PVC)
