RE: Lead Line Mapping in Distribution Systems for the Auburn Nursing and Rehabilitation Center

Dear Ms. Korenewych,

Per Section House Bill 512, Section 6109.121 of the Ohio Revised Code, the Auburn Nursing and Rehabilitation Center (Auburn Center) is submitting this report letter and a map of the water system.

The Auburn Center was built in 1994. The facility provides nursing and rehabilitation services with six private rooms, a workout facility, dining area, and a gym. There are two private wells that supply water to the facility through two (2) separate 2-inch polyvinyl chloride (PVC) pipes. The well water is treated with chlorine and orthophosphate in the Mechanical Room at the back of the Auburn Center building. After treatment, the water is distributed throughout the building by 1 ½-inch copper tubing.

Since the water supply lines are PVC and the building's water is served through copper, the Auburn Center is not expected to have any lead piping in the water system.

In addition to the mapping, a list of Tier I sampling locations was sent to Mr. Michael Deal of Ohio EPA by the January 15, 2017 dead line.

Sincerely,

Lee Benson
