There are no known Aqua or customer lead
 water service lines in this Public Water System*

*This map was compiled solely for the purpose of complying with ODC Am. 6109.121(F) which
 in part requires water utility companies to identify and map areas of the water system that are
 known or likely to contain lead service lines owned by the water utility or its customers and
 to identify characteristics of buildings served by the system that may contain lead piping, solder
 or fittings. This map is based upon data compiled from available utility records, information
 acquired during physical inspections of mains/service lines and includes assumptions based
 upon the dates in which service lines were installed or the age of the buildings receiving water
 service. Aqua cannot guarantee the accuracy of all information and reservations are made to
 compile this map, which was developed solely for the purpose noted above. This map should
 not be utilized for any other purpose, commercial or otherwise. This map will be periodically
 updated when sufficient additional records or information become available. Aqua reserves the
 right to alter or amend the content of this map at any time. Each customer remains responsible
 to independently verify whether the customer portion of the service line contains lead.

Buildings in Ohio built prior to 1988 or that use plumbing material or solder manufactured before
 1998 may have materials with greater than 6% lead and are at a higher risk of contributing lead
 to the drinking water than materials manufactured after 1988. In addition, buildings built and
 plumbing materials manufactured after 2014 were required to have less than 0.2% lead by
 weight and have the lowest risk for contributing lead to the drinking water. It should be noted
 however that, although prohibited, some use of leaded solder or leaded components may
 have occurred after the prohibitions became effective.
