To whom it may concern,

The Brunersburg WD – Tinora Waterline was installed in 1999. The water main is a 12” plastic line. All service lines to the curb box are plastic.

Because it is practically impossible to determine the lead content of an installed fixture, fitting or pipe, it should be assumed that the manufacture or installation date is the primary indicator of the lead content. Therefore; the characteristics of buildings and piping solder or fixtures would be buildings in Ohio built prior to 1998 or that used plumbing material or solder manufactured before 1998 may have materials with greater than 8% lead and are at a higher risk of contributing lead to the drinking water than materials manufactured after 1998. In addition, buildings built and plumbing materials manufactured after 2014 were required to have less than .25% lead by weight and have a lowest risk for contributing lead in the drinking water. It should be noted however that, although prohibited, some use of solder or lead components may have occurred after the prohibitions became effective.

Sincerely,

Jim Harris, President
Brunersburg Water District
