Narrative for Lead for the Village of Vanlue, Ohio

RECEIVED

MAR 06 2017

OHIO E.P.A.
N.W.D.O.

The Village of Vanlue installed their public water system in 2010. All of our water mains are PVC plastic and service lines are copper. Water mains are depicted on the map in black bold lines. We have included the form necessary to document this.

All of the Village streets are labeled in black bold lettering.

Through research of building permits and subdivisions, we have determined the approximate date of construction of all homes and buildings.

The map has the background of the different areas shaded to depict dates of construction.

Gray background shade: Areas constructed pre 1998

Yellow background shade: Areas constructed 1998 - 2014

Green background shade: Areas constructed in 2014 - present.

The gray shaded areas may contain over 8% lead in home plumbing.

The yellow shaded areas contain no lead service lines but buildings within may have plumbing materials or solder contain 8% or less lead by weight.

The green shaded areas contain no lead service lines and buildings within have plumbing materials or solder containing .25% or less lead by weight.

A copy of our Lead and Copper sample monitoring point ID's (SMP ID) is included with this map. As well as the Verification Form for Community Public Water Systems Claiming No Lead Service Lines.
