Lead Map Narrative
PWS: Village of Minerva
PWS ID # 7603812
HB 512 Requirement

Minerva's Municipal Water System provides potable treated water to 1663 residential, 64 commercial and 31 industrial users. The system utilizes ground water from three primary wells treated through sand filtration, chlorination and the addition of potassium permanganate.

Minerva's water distribution system consists of two (2) water storage tanks (one holding one million gallons and the other holding a half a million gallons) and approximately 131,500 linear feet of water mains including applicable valves and hydrants. There are currently no booster pumps associated with the distribution system. Minerva's system is pressured through gravity flow from the two water storage tanks.

The current treatment system was believed to have been installed in the late 1930's or early 1940's and has been modified and improved upon since, including the replacement of numerous water mains throughout the distribution system. Prior to this time period water was pumped from wells located in Minerva's Brock Park and pumped to a single water tower location which has since been abandoned. At this time Minerva water was provided a rather small area of the village refined to the central area of the lead distribution map.

During the 1950's and extending into the mid 1980's Minerva experienced a significant increase in residential housing development. Nearly 400 homes were constructed during this time period. Accordingly, Minerva's water distribution system expanded as well in the provision of potable water to these homes.

In regard to this growth most of it was in relation to the development of what Minerva refers to as the Fry and McDaniel Allotments which are located in the Northeastern section of the Lead Map identified as Area A & B and delineated by the large red dashed circular area. To the left of this area you will also see a smaller red dashed circular area identified as Area C which was also developed within the 1950-1990 time period. All of the distribution water mains servicing these areas are ductile iron and have no lead services.

During the time 1980 to present other areas of the development occurred and significant water main replacements were made in the area identified as Area C (again delineated within all red-dashed circular area). All the water mains has been replaced all residential services are new and do not contain any lead service taps

The section of the lead map marked as Area E located within the Southwestern Section of the lead map was developed as new in the early 1980's. The water mains in this area are composed of ductile iron. All commercial and/or residential services in this area have no lead services as well.

In addition the aforementioned larger areas of development Minerva has replaced a number of major water distribution lines over the past 25 year period. These lines include Valley Street Water Main from Market Street to Roosevelt, (Area F) the East Street Water Main from Lincoln Way to North Market, the Murray Avenue Water Main from Line Street South to the corporate limits (Area G on the lead map), Lincoln Way East Water Main from Market to Logan, Bonnieview Water Main from Lincoln Way South to Line Street (Southeastern Area of the lead map) including as well Jackson Street and Roosevelt Street. All water taps/services on these lines have no lead.

These areas of the map color coded in purple are water mains of which the village is unsure whether lead services could exist. We have no recorded as to when these lines were installed or replaced. Most of the water mains colored in purple are with Lincoln Way/Rt. 30 East from Market East to the corporate limits.

In addition, a section of north Market Street from Lincoln Way to East Street is also unknown as to the existence or nonexistence of lead service taps. In speaking with one home owner in this area he stated he had cooper service to his home to the main. There is also an area along High Street coded in purple on the map where village water department personnel found a lead service line from the main which was abandoned and replaced. This area is color coded in red on the map. It is unknown as to whether lead service taps exist on other and of the High Street water main. Other unknown water main shown on the map include Park Ave., small portions of Main Street and an area along Grant Blvd.

With regard to interior plumbing within in homes included please find a detailed listing of homes and dates constructed on the Stark County side of Minerva. A list from Carroll County has not been able to be provided. With regard to the Carroll County portion of the village there have only been ten residential/duplex structures built since 1996. All other homes were built prior to 1996, likely built in the 1920's – 1960.

Also included as part of this narrative please find "exhibit A" (listing of all residential and commercial structures and dates built in the Village of Minerva Stark County side) and "Exhibit B" (listing of all water users including names and addresses color coded as either yellow for No Lead Services or purple for unknown.
