Bates Metal Products Inc, is a Nontransient Noncommunity water system. We are located in Southern Tuscarawas County. The Oldest Portion of our Buildings were built in the 1950's, and house our Offices, and Art Departments. The fixtures throughout the buildings are made up mostly of Plastic, Copper, and very little Galvanized Material. The updated portions, are mainly copper. Our newest Buildings were completed in 1990, and consist primarily of Copper and PVC Pipes.

Buildings in Ohio built prior to 1998 or that use plumbing material or solder manufactured before 1998 may have materials with greater than 8% Lead, and are at a higher risk of contributing lead to the drinking water, than materials manufactured after 1998. In addition, buildings built and plumbing materials manufactured after 2014 were required to have less than 0.25% lead by weight and have the lowest risk for contributing lead, to the drinking water. It should be noted however that, although prohibited, some use of leaded solder or leaded components may have occurred after the prohibitions became effective.

The locations of lines, on our map, are best possible estimates. The majority of the lines, are covered by ceiling tiles, and some are routed through walls. Let it be known, that we have taken the time to point out all possible service connections, and the materials that they are made of.
