Northern Ohio Rural Water OH3902403

Description of buildings served by the water system likely to contain lead solder

The construction of Northern Ohio Rural Water's water system began in 1990.

There are no lead service lines in the Northern Ohio Rural Water's system.

Since there are no lead service lines in the water system Northern Ohio Rural Water has worked on trying to identify what material the customer's service line and indoor plumbing was made of.

In January of 2017 Northern Ohio Rural Water included a lead survey in all customer bills. The survey asked the age of their home, if their indoor plumbing was copper pipes with lead solder installed before 1983, or installed after 1982, if they had plastic, galvanized or plex plumbing. It also asked what material the service line was from the road to their house and if they had a filter on their water line.

This information gathered is plotted on the map indicating home/buildings with copper plumbing with lead solder before 1983 and copper plumbing with lead solder after 1982.

Buildings in Ohio built prior to 1989 or that use plumbing material or solder manufactured before 1998 may have materials with greater than 8% lead and are at a higher risk of contributing lead to the drinking water than materials manufactured after 1998. In addition, buildings built and plumbing materials manufactured after 2014 were required to have less than 0.25% lead by weight and have the lowest risk for contributing lead to drinking water. It should be noted however that, although prohibited, some use of leaded solder or leaded components may have occurred after the prohibitions became effective.

VERIFICATION FORM FOR COMMUNITY PUBLIC WATER SYSTEMS CLAIMING NO LEAD SERVICE LINES

The owner or operator of all community public water systems must identify and map areas of their distribution system that are known or are likely to contain lead service lines. Systems must submit a copy of the applicable map to the Ohio Department of Health and the Ohio Department of Job and Family Services. Systems must also submit a report to the director containing at least both of the following: (1) The applicable map with narrative, and (2) A list of sampling locations used to collect samples as required by Ohio Revised Code (ORC) Section 6109.121 and any rules adopted thereunder, including contact information for the owner and occupant of each sampling site.

Should a water system determine no lead service lines exist in their distribution system, they must provide information stating they reviewed, at the minimum, historical permit records and local ordinances, distribution maintenance records and information pertaining to installation dates or materials for all services lines. This information must be verified below.

I HEREBY CERTIFY THAT THE FOLLOWING METHOD(S) WERE USED TO DETERMINE NO LEAD SERVICE LINES EXIST IN THIS WATER SYSTEM'S DISTRIBUTION SYSTEM, AS REQUIRED BY ORC 6109.121(F):
