Warren Community Water and Sewer Association, Inc.

PWS OH8402703

Warren Community Water and Sewer Association was incorporated in 1969, and began serving customers in 1975. Initially, water was purchased from the Little Hocking Water and Sewer Association. In 1979 additional water was purchased from the City of Marietta to provide service to the industrial area along State Route 7 and the eastern part of the system. A well field was then developed in the Oak Grove area and put into service in 1992. With this development, Marietta and Little Hocking were placed on emergency back-up status only.

Warren Community Water has used no lead service lines since its inception. All service lines are made of plastic: %-inch and 1-inch taps are served by PE Tubing and 1 ½-inch, 2-inch, 3-inch and 4-inch taps are served by PVC pipe. A Lead Mapping Verification Form has been signed attesting to this situation.

Warren Community Water is a rural water system, and until recently, there were no building codes in areas outside city limits. Since this is the case, there is little guidance on what types of plumbing fixtures are in individual homes. There are no known cases of houses containing lead pipe, although copper with lead solder is not uncommon for houses on the system.

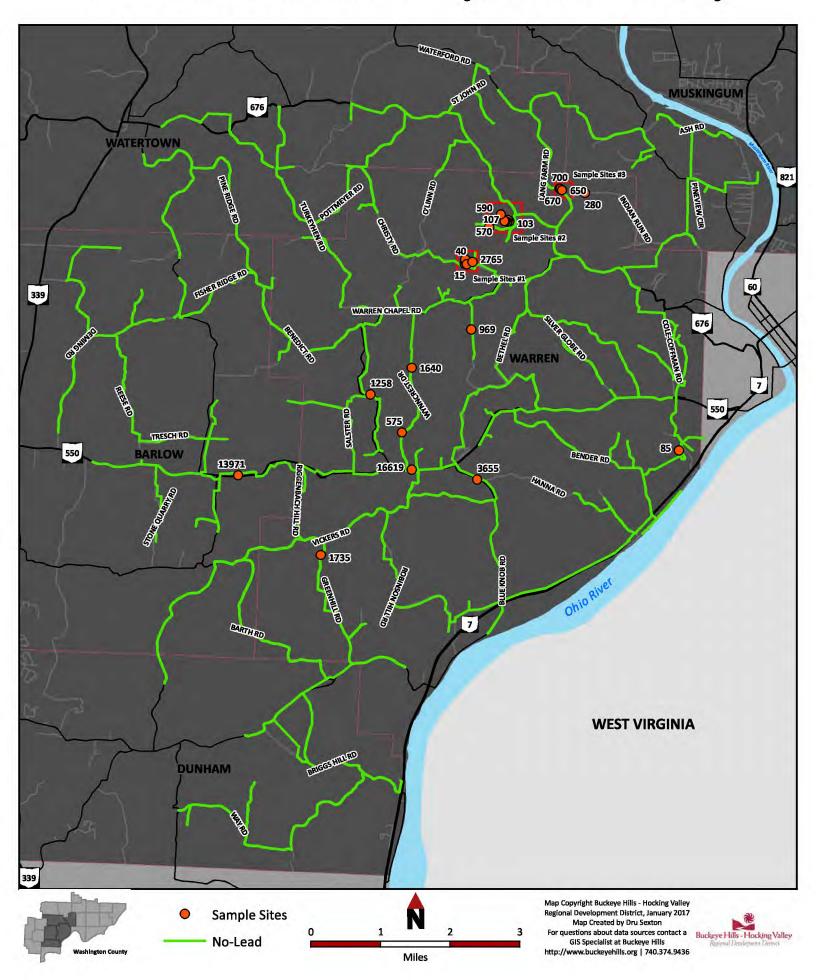

When the lead-copper sampling program went into effect for the system, most sample sites were chosen from recently built housing developments. These developments usually contained six to ten houses which were all constructed during a relatively short period of time, and many of them were Tier 1 houses.

Warren Community Water was soon granted reduced monitoring due to the low level of lead found during sampling. This has continued to be the case when monitoring is conducted every three years.

Attempts to use Tier 1 sites continues, but due a lack of response from some customers in Tier 1 houses, Tier 3 houses are used to make sure the sampling deadlines are met. There are no Tier 2 houses on the system, since multi-family dwellings have only been a very recent development on the system.

Unless a house on the system is being used to test for lead and copper, there is no actual knowledge of the type of plumbing in the dwelling, so the plumbing of most houses must be classified as unknown.

VERIFICATION FORM FOR COMMUNITY PUBLIC WATER SYSTEMS CLAIMING NO LEAD SERVICE LINES

The owner or operator of all community public water systems must identify and map areas of their distribution system that are known or are likely to contain lead service lines. Systems must submit a copy of the applicable map to the Ohio Department of Health and the Ohio Department of Job and Family Services. Systems must also submit a report to the director containing at least both of the following: (1) The applicable map with narrative, and (2) A list of sampling locations used to collect samples as required by Ohio Revised Code (ORC) Section 6109.121 and any rules adopted thereunder, including contact information for the owner and occupant of each sampling site.

Should a water system determine no lead service lines exist in their distribution system, they must provide information stating they reviewed, at the minimum, historical permit records and local ordinances, distribution maintenance records and information pertaining to installation dates or materials for all services lines. This information must be verified below.

I HEREBY CERTIFY THAT THE FOLLOWING METHOD(S) WERE USED TO DETERMINE NO LEAD SERVICE LINES EXIST IN THIS WATER SYSTEM'S DISTRIBUTION SYSTEM, AS REQUIRED BY ORC 6109.121(F):

LEAD SERVICE LINE VERIFICATION

This PWS states they have no lead service lines and has reviewed the following information (select one or more of the following):

- ☐ Historical permit records and/or local ordinances
- ☐ Distribution maintenance records (i.e. meter replacement, waterline break repairs)
- ☐ Information pertaining to installation dates for all service lines (i.e. after 1986 when lead services lines were banned)
- Service line material of all service lines is known (i.e. all service lines are known to be PVC)
