

Harrison County Water & Sewer District

Crimm Road Public Water System

PWS # OH3439712

Lead and Copper 2017

Because it is practically impossible to determine the lead content of an installed fixture, fitting or pipe, it should be assumed that the manufacture or installation date is the primary indicator of the lead content. Therefore, the characteristics of buildings and piping solder or fixtures would be **buildings in Ohio built prior to 1998 or that use plumbing material or solder manufactured before 1998** may have materials with greater than 8% lead and are at a higher risk of contributing lead to the drinking water than materials manufactured after 1998. In addition, buildings built and plumbing materials manufactured after 2014 were required to have less than 0.25% lead by weight and have the lowest risk for contributing lead to the drinking water. It should be noted however that, although prohibited, some use of leaded solder or leaded components may have occurred after the prohibitions became effective.

Crimm Road according to our records has no lead service lines. The private service lines are not lead. All public service lines are plastic due to the facility's being built in the last five years. It is estimated that approximately 99% of buildings in this service area are lead free.
