VERIFICATION FORM FOR COMMUNITY PUBLIC WATER SYSTEMS CLAIMING NO LEAD SERVICE LINES

The owner or operator of all community public water systems must identify and map areas of their distribution system that are known or are likely to contain lead service lines. Systems must submit a copy of the applicable map to the Ohio Department of Health and the Ohio Department of Job and Family Services. Systems must also submit a report to the director containing at least both of the following: (1) The applicable map with narrative, and (2) A list of sampling locations used to collect samples as required by Ohio Revised Code (ORC) Section 6109.121 and any rules adopted thereunder, including contact information for the owner and occupant of each sampling site.

Should a water system determine no lead service lines exist in their distribution system, they must provide information stating they reviewed, at the minimum, historical permit records and local ordinances, distribution maintenance records and information pertaining to installation dates or materials for all services lines. This information must be verified below.

I HEREBY CERTIFY THAT THE FOLLOWING METHOD(S) WERE USED TO DETERMINE NO LEAD SERVICE LINES EXIST IN THIS WATER SYSTEM'S DISTRIBUTION SYSTEM, AS REQUIRED BY ORC 6109.121(F):

LEAD SERVICE LINE VERIFICATION

This PWS states they have no lead service lines and has reviewed the following information (select one or more of the

following):

For Ohio EPA use only:

Date Verification Rec'd:

☐ Historical permit record ☐ Distribution maintenance waterline break repairs) ☐ Information pertaining to (i.e. after 1986 when less ☑ Service line material of service lines are known	ce records (i.e. met) o installation dates ad services lines w all service lines is	er replacement, for all service lines vere banned)

Narrative: The information listed below is for the Supreme council of the House of Jacob water system.

Some of the buildings on our water system were built in the 1800's, plumbing was installed in the late 40's early 50's. These older homes and buildings would likely be considered high risk. Structures built in the 60's, 70's, 80's and 90's could also likely be considered high risk, according to the information in the email sent to me on 2/28/2017. The email stated ,"buildings built in Ohio prior to 1998 or that used material or solder manufactured before 1998 may have materials with greater than 8% lead and are at a higher risk of contributing lead to the drinking water than materials manufactured after 1998." The buildings built from 2000 to 2005 would be considered low risk. The homes built from 2005 to 2008 are considered no risk. Any repairs to the older homes and buildings done within the last 10 or 12 years would have shark bite connectors as the maintenance department began to move away from solder in most cases.

David L. Woods, Supervisor
