

- PRESSURE TANK
- BACKFLOW PREVENTER
- SINK
- TOILET
- COPPER TUBING
- PEX TUBING

THIS BUILDING WAS CONSTRUCTED NEW IN 2005. WATER COMES FROM THE WELL THROUGH PEX TUBING AND THEN ENTERS THE PRESSURE VESSEL INSIDE THE WELL HOUSE. WATER LEAVES VESSEL AND SUPPLIES A SMALL RESTROOM INSIDE WELL HOUSE VIA PEX TUBING. WATER IS THEN FED FROM MANIFOLD TO THE BUILDING VIA UNDERGROUND PEX TUBING. ONCE IT IS INSIDE BUILDING WATER GOES THROUGH THE BACKFLOW PREVENTER AND IS DISTRIBUTED THROUGH COPPER PIPING FROM THERE TO ALL OF THE REST OF THE BUILDING.
