

Worthington Arms MHP was established in 1968. The Worthington Arms MHP drinking water distribution mains consist of Cast Iron and PVC pipe. The tapping saddles and corp stop are made of Brass or Plastic. The copper setters that were made prior to June 1986 may contain lead solder, all copper setters made after June 1986 may not. No lead service lines have been encountered over numerous years of distribution maintenance. The Worthington Arms MHP now has a mechanism in place to track/remove any potential lead service lines encountered in the future.

Because it is practically impossible to determine the lead content of an installed fixture, fitting or pipe, it should be assumed that the manufacture or installation date is the primary indicator of the lead content. Therefore, the characteristics of buildings and piping solder or fixtures would be buildings in Ohio built prior to 1998 or that use plumbing material or solder manufactured before 1998 may have materials with greater than 8% lead and are at a higher risk of contributing lead to the drinking water than materials manufactured after 1998. In addition, buildings built and plumbing materials manufactured after 2014 were required to have less than 0.25% lead by weight and have the lowest risk for contributing lead to the drinking water. It should be noted however that, although prohibited, some use of leaded solder or leaded components may have occurred after the prohibitions became effective.

Operator of Record

A handwritten signature in black ink, appearing to read "M. Mike McLaughlin". The signature is written in a cursive, flowing style.

M. Mike McLaughlin
