Re: Lead Water Service Lines  
Ohio EPA Required Statement – Tussing Rd. Water System  
PWS ID: OH 23019122

Dear Katie:

The Fairfield County Utilities Department has conducted a systematic review of our public drinking water accounts as it relates to lead service lines. We estimate that approximately 90% of our Tussing Rd. water systems service lines are plastic and newer than 1986. However, approximately 75% of the homes are older than 1998. In areas where homes are older than 1986 the services have typically been copper and plastic. The County has historically not conducted any inspection of fixtures or fittings inside homes however; we do have records of nearly every service line.

The majority of our commercial establishments were constructed in the 1990's and many have been renovated as new tenants occupy the buildings. In addition, the public schools serviced by the County's water system are new (newer than 1998) or have been renovated to handle growth of the area. We have not encountered any lead service lines in either commercial or public schools.

While we do not have compete information on every customers interior waterline material we have reviewed maintenance and meter repair records and have not encountered a lead waterline in a house or business.

Should you have any further questions please feel free to let me know.

Sincerely,

Tony Vogel, P.E.  
Director of Utilities
