RE: Lead Service Line and Fixture Mapping Project

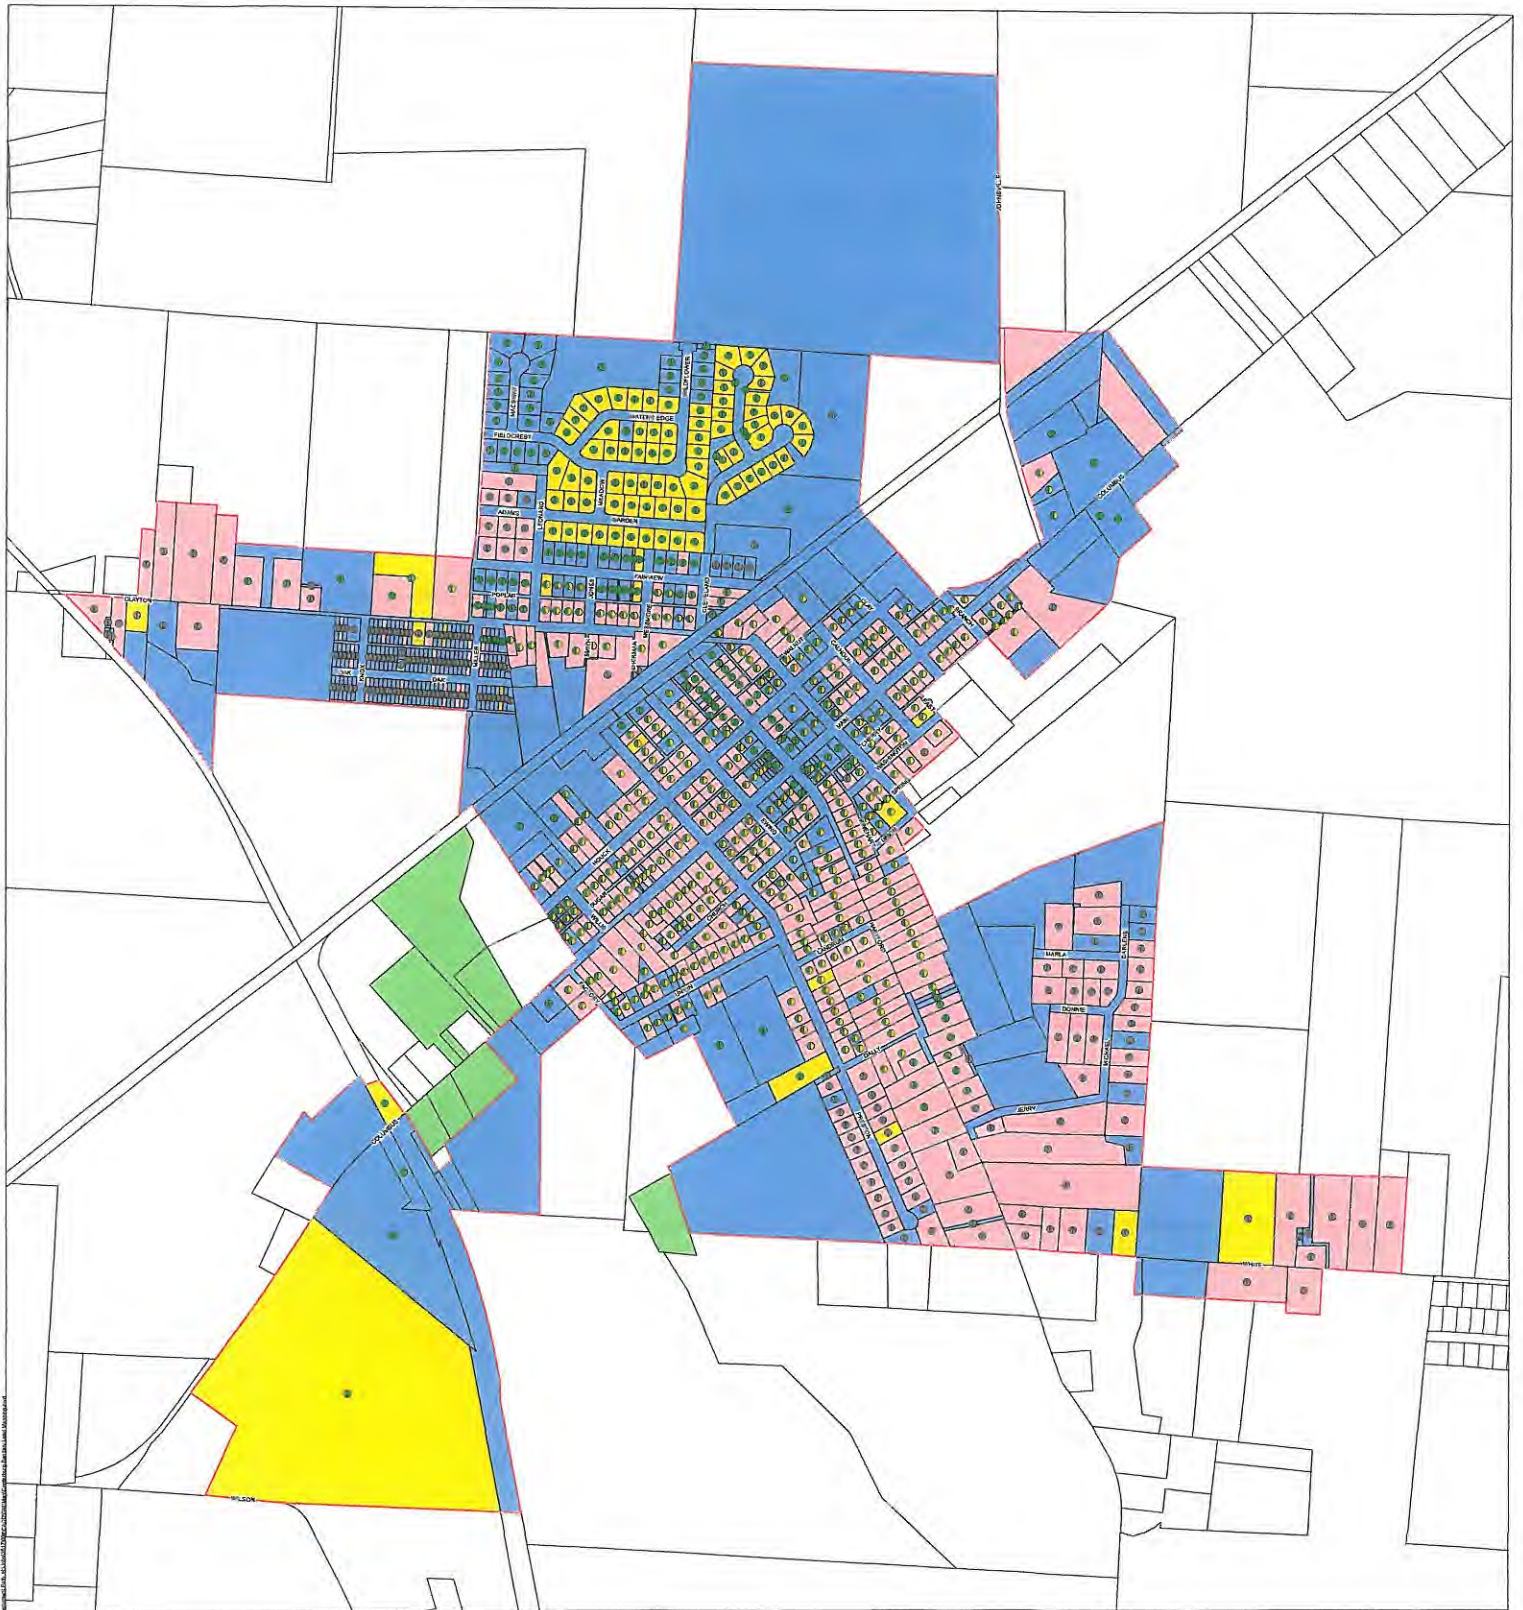

To whom it may concern,

Enclosed is a map of the Village of Centerburg with an overlay representing Public Water System #4200012. Parcels are shaded individually as to what year the structures were built which indicates the possibility or lack thereof to contain lead plumbing, fixtures and/or lead solder. A marker is placed on each parcel noting the water service line material. All parcels built between 1850 and 1998 are marked as lead service due to the possibility or likelihood of the service line material to have been installed as lead unless the Village or its personnel know that the material is non-lead. The Village has marked parcels as non-lead service material only if the material has been uncovered and known to be non-lead or if the material was installed per a non-lead specification. Areas or parcels marked as unknown are believed by the Village to be non-lead services however the Village does not have enough information on said area or parcel to deem it completely non-lead. As services are uncovered in the future and found to be other than depicted on this map the appropriate changes will be made.

Respectfully,

M. Joseph Hardin  
Utility Superintendent
