VERIFICATION FORM FOR COMMUNITY PUBLIC WATER SYSTEMS CLAIMING NO LEAD SERVICE LINES

The owner or operator of all community public water systems must identify and map areas of their distribution system that are known or are likely to contain lead service lines. Systems must submit a copy of the applicable map to the Ohio Department of Health and the Ohio Department of Job and Family Services. Systems must also submit a report to the director containing at least both of the following: (1) The applicable map with narrative, and (2) A list of sampling locations used to collect samples as required by Ohio Revised Code (ORC) Section 6109.121 and any rules adopted thereunder, including contact information for the owner and occupant of each sampling site.

Should a water system determine no lead service lines exist in their distribution system, they must provide information stating they reviewed, at the minimum, historical permit records and local ordinances, distribution maintenance records and information pertaining to installation dates or materials for all services lines. This information must be verified below.

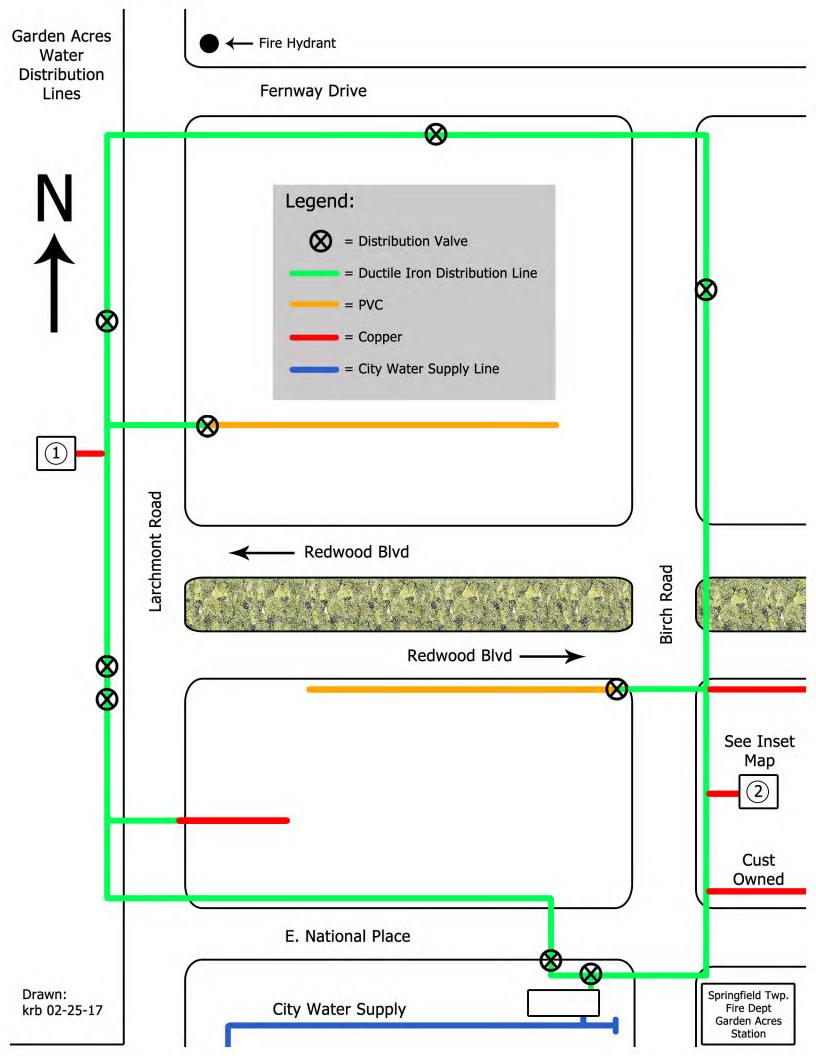

I HEREBY CERTIFY THAT THE FOLLOWING METHOD(S) WERE USED TO DETERMINE NO LEAD SERVICE LINES EXIST IN THIS WATER SYSTEM'S DISTRIBUTION SYSTEM, AS REQUIRED BY ORC 6109.121(F):

This PWS states they have no lead service lines and has reviewed the following information (select one or more of the following): Historical permit records and/or local ordinances Distribution maintenance records (i.e. meter replacement, waterline break repairs) Information pertaining to installation dates for all service lines (i.e. after 1986 when lead services lines were banned) Service line material of all service lines is known (i.e. all service lines are known to be PVC)

Garden Acres Water Co., LLC

Lead & Cooper History

Garden Acres Water Co., LLC. is a mutually owned water system classified by the state of Ohio as a public utility. The Garden Acres Water Co., was incorporated in October, 1940, as a not for profit corporation to supply water to lot owners in Garden Acres Addition Plat No. 1 in Springfield Township, Clark County, Ohio.

There are no drawings, maps or records of when it was installed. We have determined over the years from talking to some of those who have served on the board of trustees that there was no lead piping installed. We have many years of I witness accounts and personal observation that the distribution system is composed of 4" ductile iron piping. There are no soldered connections to distribution system. We know that there has been some PVC installed in the distribution also. We know of no customer owned service lines that are of lead piping. There are now water meters on customer service lines.

Single building community water systems and nontransient noncommunity water systems are required to map areas of the system that have solder, fixtures and pipes containing lead.

Because it is practically impossible to determine the lead content of an installed fixture, fitting or pipe, it should be assumed that the manufacture or installation date is the primary indicator of the lead content. Therefore, the characteristics of buildings and piping solder or fixtures would be buildings built prior to 1998 or that use plumbing material or solder manufactured before 1998 may have materials with greater than 8% lead and are at a higher risk of contributing lead to the drinking water than materials manufactured after 1998

We will continue to monitor <u>customer service lines</u> when repairs or replacement of these lines occur for any lead lines that may have been installed.
