Subject: Narrative of KTEC Water System

Address 10100 Ballentine Pike New Carlisle Ohio 45344

PWS Id # OH1237912

To: Whom it may concern

Building 01 was built in stages starting in the mid 1960's and was added to several times with latest being in 1987. A new well was drilled in 1988 and new plumbing all copper was installed at that time.

During the above time frame building # 2 was built and added to several times. Note building # 2 has no water system or plumbing running to it at all.

In 1998 KTEC added a new building # 3 water was supplied from shop # 1 for use in the bathroom and a drinking fountain.

Around 2005 building # 1 and # 3 had an arsenic removal filtration system added to both drinking fountains including new water softeners.

December 2016 new pressure tanks was installed at the main entrance of the well to replace leaking tanks.

Water line from the pump to the main pressure tanks is 1 ¼" black plastic pipe. After the pressure tank all line are in copper ranging from 1 ¼" down to ½".

All faucets have been changed to meet the no lead standards in the past couple years.

The above information does not have the exact dates as they are not available. I am going off my memory of taking care of the water system and over the last 40 years of employment with KTEC.

Thank you
Jessie Grigsby
