

**H.B. 512 Service & Fixture Mapping
Park Layne PWS**

Buildings in Ohio built prior to 1998 or that use plumbing material or solder manufactured before 1998 may have materials with greater than 8" lead and are at a higher risk of contributing lead to the drinking water than materials manufactured after 1998. In addition, buildings built and plumbing materials manufactured after 2014 were required to have less than 0.25% lead by weight and have the lowest risk for contributing lead to the drinking water. It should be noted however that , although prohibited, some use of leaded solder or leaded components may have occurred after the prohibitions became effective.

Clark County Department of Utilities has no records of lead service lines being installed or discovered in any of our service areas. Clark County Department of Utilities has never found a lead service in any of our districts during any meter replacement project, curb valve replacement, water main repair or any other maintenance or replacement activity.

Park Layne Water System – OH1201112

The Park Layne water system serves approximately 1,700 accounts. Clark County Utilities has a Class 1 water treatment system (wellfield and treatment) located on the north side of the Park Layne Subdivision. Treatment is limited to Fluoridation and Chlorination as required by the State of Ohio. The water system began construction in 1960 and continues to expand with ongoing developments.

The service materials in the Park Layne system have been found to be copper, HDPE, PEX, cross linked polyethylene, and galvanized steel. No lead services have ever been located by the Clark County Staff during normal maintenance activities or repairs.
