

## THREE R ROLLING TERRACE MHP LLC. (ROLLING TERRACE MHP) 3301 MILLER RD. SPRINGFIELD, OHIO 45502

PWS 1253242

**LEAD MAPPING PROJECT 2017** 

NARRITIVE

The Park was built in 1970.

The Park has a master meter, but individual homes are not metered.

All main line and service lines throughout the Park are galvanized pipes.

All service lines are galvanized lines-see below recent repairs.

3/2010 Lot 7—repaired leak in service line before shut off—galvanized 11/2014—Lot 22 repaired leak in service line before shut off—replaced with PEX

Lines in well house are galvanized and PVC have been repaired over the years with galvanized and PVC pipe. (Building A on map)

Well # 1 line from pump was replaced with black plastic well pipe March 2010.

Well #2 line from pump is galvanized pipe.

Lines in the old laundry room are copper with solder (age unknown, but prior to 2006). This building is not open to the public and is only used as storage and workroom for staff. (Building B on map). Should be called Workshop/storage area.

All mobile homes are owner occupied.

A form was sent out to all residents asking them to check the type of lines in their homes and return. Of the 36 forms sent out 22 were returned.

Because it is practically impossible to determine the lead content of an installed fixture, fitting or pipe, it should be assumed that the manufacture or installation date is the primary indicator of the lead content. Therefore, the characteristics of buildings and piping solder or fixtures would be buildings in Ohio built prior to 1998 or that use plumbing material or solder manufactured before 1998 may have materials with greater than 8% lead and are at a higher risk of contributing lead to the drinking water than materials manufactured after 1998. In addition, buildings built and plumbing materials manufactured after 2014 were required to have less than 0.25% lead by weight and have the lowest risk for contributing lead to the drinking water. It should be noted however that although prohibited, some use of leaded solder or leaded components may have occurred after the prohibitions became effective.

### VERIFICATION FORM FOR COMMUNITY PUBLIC WATER SYSTEMS CLAIMING NO LEAD SERVICE LINES

The owner or operator of all community public water systems must identify and map areas of their distribution system that are known or are likely to contain lead service lines. Systems must submit a copy of the applicable map to the Ohio Department of Health and the Ohio Department of Job and Family Services. Systems must also submit a report to the director containing at least both of the following: (1) The applicable map with narrative, and (2) A list of sampling locations used to collect samples as required by Ohio Revised Code (ORC) Section 6109.121 and any rules adopted thereunder, including contact information for the owner and occupant of each sampling site.

Should a water system determine no lead service lines exist in their distribution system, they must provide information stating they reviewed, at the minimum, historical permit records and local ordinances, distribution maintenance records and information pertaining to installation dates or materials for all services lines. This information must be verified below.

I HEREBY CERTIFY THAT THE FOLLOWING METHOD(S) WERE USED TO DETERMINE NO LEAD SERVICE LINES EXIST IN THIS WATER SYSTEM'S DISTRIBUTION SYSTEM, AS REQUIRED BY ORC 6109.121(F):

# This PWS states they have no lead service lines and has reviewed the following information (select one or more of the following): Historical permit records and/or local ordinances Distribution maintenance records (i.e. meter replacement, waterline break repairs) Information pertaining to installation dates for all service lines (i.e. after 1986 when lead services lines were banned) Service line material of all service lines is known (i.e. all service lines are known to be PVC)
