

Legend for the Village of Lynchburg
Distribution System

- No Information of Water Mains Installed before 1963
- No Information of Water Mains Installed after 1963 to 1998
- PVC Water Mains Installed After 1998
- Possible Lead
Area possibly contains lead but not known to have lead due to the lack of records. It is difficult to differentiate lead risks in this area and is the most probable area to contain lead

Please see attached documents for a narrative description of buildings in distribution system.

Original map edited by P Weyrich 2-24-17

The Village of Lynchburg Narrative for Water Distribution Systems and Buildings

Date: February 24, 2017

A. Documentation

No documents were available for the Village of Lynchburg that would identify areas in the distribution system that contains lead. There are no written records such as plumbing codes or regulatory charges, historical permit records or records obtained during maintenance activities, or as-builts for service connections that would indicate the type of material used for public or private service lines.

In speaking with past utility workers, when a water main and meter pits were exposed no lead was observed at the tap or meter connection. The taps were observed to have copper tubing service lines from the main line to the meter pits. The meter, meter setters and fittings are primarily brass.

There are no records for the type of material used in the private service lines. A database has been created that lists the lots by year built, which would correlate to potential lead content in the materials used during construction. The Village plans to survey the residents to gather information as to what materials were used in construction and dates / materials of any updates to the private lines and indoor plumbing.

B. List of all structures supplied by the Village of Lynchburg Distribution System

A database was created based on information provided by the Highland County Auditor's records that lists all structures, listed by date of construction and by street. Each site is identified by street address and parcel numbers to assist in locating a site of interest on the map provided.

C. Buildings in Ohio built prior to 1998 or that use plumbing material or solder manufactured before 1998 may have materials with greater than 8% lead and are at a higher risk of contributing lead to drinking water than materials manufactured after 1998. In addition buildings built and plumbing materials manufactured after 2014 were required to have less than 0.25% lead by weight and have the lowest risk for contributing lead to drinking water. It should be noted however that although prohibited, some use of leaded solder or leaded components may have occurred after the prohibitions became effective.

D. Possible Lead : Area enclosed in yellow border possibly contains lead but not known to have lead. Due to the lack of records it is difficult to differentiate lead risk in this area and is the most probable area to contain lead.

Village of Lynchburg (by date)
