**SHADYSIDE WATER DEPARTMENT
3737 RIVERSIDE DRIVE
SHADYSIDE, OHIO 43947**

During the 2012 Water Improvements Project, replacing waterline and fire hydrants it was observed that all old hydrants have lead soldered joints. Also, the old mains are primary sandcast or ductile iron with probable lead soldered joints. We have replaced sixty-seven hydrants and there are still forty old ones that need to be replaced.

We are currently accepting bids to replace one thousand seven hundred and ten residential and twenty-four commercial meters. At this time, we will be documenting each residents and businesses service line coming into the meter.

We do not have a water softner at the plant. We treat the water with chlorine and fluoride.
