## Cherry Ridge Waterworks PWS# OH7900303 Lead and Copper 2017

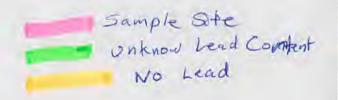

Because it is practically impossible to determine the lead content of an installed fixture, fitting or pipe, it should be assumed that the manufacture or installation date is primary indicator of the lead content. Therefore, the characteristics of buildings and piping solder or fixtures would be buildings in Ohio built prior to 1998 or that use plumbing material or or solder manufactured before 1998 may have material with greater than 8% lead and are at a high risk of contributing lead to the drinking water then the materials manufactured after 1998. In addition, buildings built and plumbing materials manufactured after 2014 were required to have less than 0.25% lead by weight and have the lowest risk for contributing lead to the drinking water. It should be noted that, although prohibited, some use of lead solder or lead components may have occurred after prohibitions became effective.

Sample Sites shown on Maps.

It is estimated that 90% of homes on the Cherry Ridge Waterworks line were built before 1998
