### NARRATIVE for 2017 LEAD MAPPING

**Distribution System Vains:** After review of the Village distribution system as-builts, mapping and various other records available to current Village personnel as well as past operational efforts revealing mainline construction materials, the Village doesn't have any leaded molten joint on their water mains.

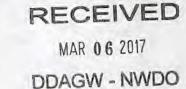

**Service Line Materia**: The Village doesn't believe to have any lead service lines from the main up to the building within its distribution system.

Buildings served by FWS likely to contain lead solder, plumbing or fixtures: The map submitted details by parcel, homes and buildings built within the specified time frames. Those structures built within the timeframes determined to have the potential of lead solder, plumbing or fixtures beyond the service lateral are detailed based on structure age information obtained from the Wood County Auditors office.

**Description of areas of the PWSD where susceptible buildings are located:** Buildings that may or may not have lead solder, fixtures or plumbing are located in most of the service area of the Village.

**History of Lead Sampling:** Review of historical data shows that the Village has never been above the Action level for lead and copper sampling.

**Lead and Copper Sample Sites:** A listing of Tier 1 sample sites, comp ete with addresses and contact information is attached.

# VERIFICATION FORM FOR COMMUNITY PUBLIC WATER SYSTEMS CLAIMING NO LEAD SERVICE LINES

The owner or operator of all community public water systems must identify and map areas of their distribution system that are known or are likely to contain lead service lines. Systems must submit a copy of the applicable map to the Ohio Department of Health and the Ohio Department of Job and Family Services. Systems must also submit a report to the director containing at least both of the following: (1) The applicable map with narrative, and (2) A list of sampling locations used to collect samples as required by Ohio Revised Code (ORC) Section 6109.121 and any rules adopted thereunder, including contact information for the owner and occupant of each sampling site.

Should a water system determine no lead service lines exist in their distribution system, they must provide information stating they reviewed, at the minimum, historical permit records and local ordinances, distribution maintenance records and information pertaining to installation dates or materials for all services lines. This information must be verified below.

I HEREBY CERTIFY THAT THE FOLLOWING METHOD(S) WERE USED TO DETERMINE NO LEAD SERVICE LINES EXIST IN THIS WATER SYSTEM'S DISTRIBUTION SYSTEM, AS REQUIRED BY ORC 6109.121(F):

# This PWS states they have no lead service lines and has reviewed the following information (select one or more of the following): | Historical permit records and/or local ordinances | | Distribution maintenance records (i.e. meter replacement, waterline break repairs) | | Information pertaining to installation dates for all service lines (i.e. after 1986 when lead services lines were banned) | | Service line material of all service lines is known (i.e. all service lines are known to be PVC)
