

Most of the Big Prairie village does not have lead service lines but there are several houses that we are not sure if the service lines are completely changed to plastic. Most homes were built in the early 1900's. Some were built in the 40's and 50's. Only two new homes have been built in the last 25 years. There are several mobile homes (trailers) that have been put in the village in the last 10 years and have plastic piping for service lines. Buildings in Ohio built prior to 1998 or that use plumbing material or solder manufactured before 1998 may have materials with greater than 8% lead and are at a higher risk of contributing lead to the drinking water than materials manufactured after 1998. In addition, buildings built and plumbing materials manufactured after 2014 were required to have less than 0.25% lead by weight and have the lowest risk for contributing lead to the drinking water. It should be noted however that, although prohibited, some use of leaded solder or leaded components may have occurred after the prohibitions became effective. Thank you, Terry Murphy, Operator for the Big Prairie Water Company. (CA-1082704-07).
