

**Greenlawn Estates Mobile Home Park  
Distribution System Lead Mapping Narrative**

**6/25/2018**

Existing distribution mapping was primarily used for reference for creating the lead mapping. Due to the recent new ownership not much other information was available. All distribution lines in the mobile home park are galvanized pipe. Since the new owners took over, when a water leak occurs PVC pipe is used to repair line. All trailers in the mobile home park have PVC plumbing. Based on this information all service lines are considered galvanized (other), and all home lines are non-lead (plastic).

The map legend is located on the map.
